THE GROWTH OF CONSUMER CREDIT

The past two years of rapidly rising production and income were accompanied by a large expansion in consumer credit. At the end of 1955 the total of consumer credit outstanding was \$2,182 million, an increase of \$339 million over the total outstanding at the end of 1954. In the course of 1956 there was a further increase of \$287 million, bringing the total to \$2,469 million at the end of 1956. The recent expansion in consumer credit outstanding follows a period of distinct slowing down in its rate of growth,

associated with the moderate recession in production and employment of 1953-1954. The rapid expansion in consumer credit outstanding, following the recession, began in the second quarter of 1955 and in year to year comparison quarterly rates of increase accelerated until the first quarter of 1956 and moderated thereafter. The large and insistent demand for consumer credit during recovery and expansion is among the factors making for the tightening of credit and the rise in interest rates.

The growth of consumer credit as a post-war development was interrupted only in the period following the outbreak of the Korean War when restrictions on its use, accompanied by special taxes on consumer durables, formed part of a programme designed to ease inflationary pressures and channel scarce resources into defence uses. Following the removal of restrictions, a pronounced expansion of consumer credit began in the course of 1952 and continued in 1953. Post-war trends in consumer credit up to mid 1954 were discussed in the Canadian Statistical Review in November of that year.

The major part of the increase in the past two years is in instalment credit. Instalment credit outstanding at the end of 1955 was \$978 million, an increase of \$159 million over the amount outstanding at the end of 1954. In 1956 the increase was \$196 million, bringing the total to \$1,174 million at the end of the year. Most of this increase is accounted for by the paper held by finance companies, which reflects mainly credit extended for the purchase of automobiles. The increase in this type of credit was even more pronounced in 1956 than in 1955. Instalment credit provided by retail

dealers continued to rise in 1956, but at a much lower rate than in the previous year. The other major source of consumer credit outstanding, cash personal loans, rose only about half as much in 1956 as in 1955 as the chartered banks curtailed this type of lending. Charge accounts, a comparatively small and stable element in the total, rose very moderately in both years.

Chartered banks and sales finance companies were the source of most of the additional consumer credit. In 1955 the banks increased their cash per-

sonal loans by \$89 million but in 1956 advances under this heading were contracted by \$6 million, blowever, other¹ cash personal loans increased by about \$80 million in both years. Instalment and other finance companies increased their borrowings from the banks, by \$129 million in 1955 and a further \$98 million in 1956, as well as drawing on other sources of financing.

 Loans by small loan companies, licensed money lenders and credit unions.

Consumer Credit and Consumer Expenditure

The debts incurred in charge accounts are short-term and usually incurred for motives of convenience. While some long-term debt is contracted in emergencies, for the most part it is incurred to finance what can be regarded as consumer capital.

Typically credit is used to finance the purchase of durables. Since such expenditures are more discretionary than other items in the consumer budget, they are highly volatile and have a distinct cyclical pattern. It is possible that the decision to purchase durables is related not only to current

but to anticipated future income, as well as to other factors such as new habits, new tastes and new products.

Whether or not it can be explained largely in terms of expectations, the fact is that expenditure on durables was sharply curtailed in the recession of 1953-54 even though personal income was maintained. The resurgence of expenditures on durables both reflected and contributed to the subsequent vigorous recovery and expansion. Such expenditure fell by 5 per cent in 1954, compared with 1953, and then rose 13 per cent in 1955 and a further 7 per cent in 1956.

It is interesting to note that while consumer credit in relation to personal disposable income rose from 10.4 per cent in 1954 to 11.6 per cent in 1956, personal savings in relation to disposable personal income also rose in the past two years.

Consumer Credit Extended by Instalment Finance Companies

New statistical series on extensions and repayments of credit by instalment finance companies were published for the first time in the April issue of the Statistical Summary of the Bank of Canada and are also to be published in future by the Dominion Bureau of Statistics. These new series provide data on this important form of credit up to the end of the first guarter of 1957.

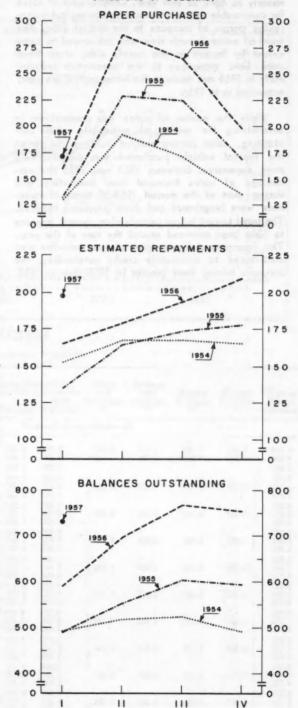

Extensions represent the gross amount of credit extended over a stated period of time. The balance outstanding is the cumulated total, as of a point of time, of credits granted less cumulated repayments. From the balances outstanding may be derived the net credit change, which is the difference between credit extensions and repayments during a given period of time.

The balance of consumer credit outstanding on the books of instalment finance companies at the end of March, 1957 was \$730 million, which compares with \$589 million and \$490 million at the same period in the two preceding years. The series, being short and highly seasonal, is difficult to interpret. Quarter to quarter comparisons reveal a sharply accelerating rate of rise in extensions in the second quarter of 1955 and it was not until the second half of 1956 that the rate of increase moderated. This movement is in the main attributable to credit issued to finance new and used passenger cars, which accounted for nearly \$600 million of the \$730 million outstanding at the end of March of this year.

Automobile Credit — The number of new passenger cars sold was particularly affected by the recession; it fell 15 per cent in 1954, rose nearly 25

RETAIL FINANCE COMPANIES RETAIL FINANCING OF CONSUMER PURCHASES

(MILLIONS OF DOLLARS)

per cent in 1955 and a further 5 per cent in 1956, reaching a record high of nearly 407,000 vehicles. Having been lower than the previous year in the first quarter of 1955, sales began to advance very sharply in April of that year. Comparisons of sales for comparable quarters show a continuing but diminishing margin of increase to the end of 1956. The trend of sales through time was influenced to some extent by factors on the supply side, since there were work stoppages in the automotive industry early in 1955 and again in the latter part of the year, extending in to 1956.

While the number of sales was predominent in determining the amount of automobile credit outstanding, other factors entered in. Over the period the typical vehicle purchased was progressively more expensive. Between 1953 and 1955 the percentage of sales financed rose moderately, and during part of the period 1953-56 terms of repayment were lengthened and down payments reduced. The trend toward longer periods of repayment appears to have been reversed around the turn of the year. The financing of larger sales of used vehicles also contributed to automobile credit outstanding, the increase having been greater in 1955 than in 1956.

Other Instalment Credit — Sales of consumer durables other than automobiles advanced slightly in 1954 despite the recession and advanced 7 -- 8 per cent in each of the two succeeding years. Sharply contrasting trends in sales of particular durables help to account for the over-all trend; the market for television sets, which came into production in Canada in 1949, expanded very rapidly until 1955 and contracted sharply the following year. The trend of sales of furniture and appliances over recession and recovery was, no doubt, influenced by the fact that housing completions rose in each of the three years, with a particularly large increase in 1955.

MAY,

INDU

As in the case of automobiles, the proportion of credit to total sales rose between 1953 and 1955 and then declined slightly. Apparently there was also some lengthening of the period of repayment. At the end of March, 1957, the instalment credit outstanding under this heading by instalment finance companies was \$131 million compared with \$123 million a year earlier.

As reflected in sales of furniture, radio and appliance stores.

INDUSTRIAL PRODUCTION

The index of industrial production continued to fluctuate within very narrow margins in the first quarter. In general the trend has been level for the past six months. The manufacturing and mining components increased fractionally in March.

MANUFACTURING PRODUCTION

Both components of manufacturing production increased in March. Food and beverage production contributed to the rise in non-durable output. In durables, iron and steel continued to advance while transportation equipment continued to decline.

LABOUR INCOME AND FARM CASH INCOME

Seasonally adjusted total labour income increased again in March with services exhibiting the strongest upward movement. Farm cash income in 1956 recovered from the low levels of 1954 and 1955 and is now approaching the level of 1953.

⁽¹⁾Averages or totals of unadjusted data. ⁽²⁾Seasonally adjusted at annual rates. ⁽³⁾Beasonal adjustment computed by Central Mortgage and Housing Corporatios.

⁽¹⁾Three-term moving average of seasonally adjusted data.

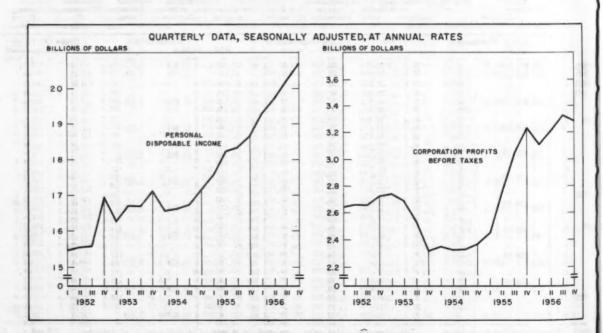

HOUSING STARTS AND COMPLETIONS

Seasonally adjusted housing starts continued to recover in April while housing completions levelled off.

PERSONAL DISPOSABLE INCOME AND CORPORATION PROFITS

Seasonally adjusted corporation profits in the fourth quarter declined slightly. Personal disposable income in 1956 maintained that rate of growth achieved in the previous year.

O'Beasonally adjusted at annual rates.

O'Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period.

O'Rough outle of 126 cs. ft.

O'Bi urban areas of 5,000 population and over.

O'Average of weekly rates.

O'Middle of moath.

O'Revised stording to new beach marks.

O'Prior to January, 1987, this total includes the set amount generated by the more important central electric staticus, i.e. companies, municipalities and individuals selling or distributing electric energy. From January, 1987 it includes all generating especies producing over ten million kilowatt hours.

^{0)&}quot;De facto" population. Annual data are for June.

O)At current market prices. Annual data are totals of the four quarters.

O)Output of building and civil engineering work excluding the output of building operatives employed by private firms outside the building and civil engineering industries.

O)New series not strictly comparable with previous figures. Value for first quarter of 1956 on the former basis was £276 million.

O)New series. All manufactured product other than food, fuel and tobacco.

Note.—Until the end of 1986, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1985 have been revised accordingly. Monthly figures for 1986 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

O'Not applicable to figures on population and immigration.

O'Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of James, 1981.

O'Immigrant admissions by country of last permanent residence. Annual and quarterly figures are totals for the period.

Source: Monthly Report of Vital Statistics, D.B.S. and Department of Citisenship and Immigration.

O'Accrued set income of farm operators from farm production. The seasonally adjusted data include an arbitrary amouthing of crop production, standard seasonal adjustments for live-stock items and a seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretate aboutd not be given the seasonally adjusted figures for this item.

O'This item differs from column 4, bottom of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

O'Seasonal (formerly supplementary) benefit data included.

O'On last working day of month; claimants formerly classified as "abort time" and temporary lay-off are included.

O'Estimates based on number of payment documents; prior to February 1955, data related to week containing last working day of month; commencing with February 1955 estimates are based on average weekly number of payments.

O'Commencing with October 1955, the number of calendar weeks during which a benefit payment was made; prior to that date, payment was made on the basis of individual days.

O'Revised to relate to the Thursday nearest to the last day of the month.

WExcludes gold. Warithmetically converted from 1935-39-100. Windows were revised after the announcement of final payments on barley and on cats in November and of interim payments on wheat in January. Western wheat prices are final prices. For the period August 1, 1935 to July 31, 1938, Western wheat prices are initial prices plus an interim payment. Since August 1, 1936, only initial prices are available for wheat, onts and barley.

Note: The coverage of this series has been expanded as of January, 1987 to include, in addition to Central Electric Stations industrial power installations that generate electricity for their own use. Except for utilities, comparable data for previous months are not available.

O'Prior to January, 1987, these totals include the net amount generated by the more important central electric stations, i.e. companies, municipalities, and individuals solling or distributing electric energy. From January, 1987 they include all generating agencies producing over ten million kilowath hours per year. The total generating over ten million kilowath hours per year.

O'Dotal net generation less net exports. Total power available for disposal for January, 1987 on the old basis was 7,170 million kilowath hours.

O'Mainly the amount used in electric boilers.

Note: In view of the change, in March 1955, in the method of reporting certain categories of refining operations, the classification of the table was altered so that entinuity of the series could be maintained as much as possible.

©Prior to March, 1955 excludes a certain amount of imported fuels.

O'In industries where long-term contracts involve the receipt of progress payments, all such payments are treated as sales. The series represents an estimated projection, on a monthly basis, of the latest available Census of Industry values.

O'Total new orders received during the period, at estimated selling values. The series cover total New Orders, set of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and also be reported as shipments in the month received) or whether they will be added to existing backlogs.

O'Estimated total unfilled orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. Estimated are derived by inflating the monthly reported values to total for each industry as obtained from annual surveys.

('Manufacturing inventory owned by manufacturers, whether held at plant or not, at end of period. Source: Monthly Report of Inventories, Shipments and Orders in Manufacturing Industries, D.B.S.

(a)The production of beer is shown in thousand

(i)Releases of domestically manufactured tobacco for consumption in Canada.

(ii) End of period.

(iii) The production of barrels of 35 gallons each.

(iii) Includes bottling of imported liquors.

⁰⁾Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are ed.

O'Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and pulp.

O'Mill shipments destined for export.

Source: Monthly Report on Primary Iron and Steel, D.B.S.

Note.—Effective January, 1967, the data in this table relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe, previously covered, are no longer included. On this account totals shown are not comparable with those of previous years.

(i) Shipments for further processing within own firm and for sale in Canada.

*Construction of dwelling units.

Note.—These data are the results of a nation-wide survey carried out each month by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of \$,000 or more are enumerated completely. Approximately 400 sample area lying outside these municipalities were also chosen for complete enumeration; in June, 1955, the number of sample areas was increased to nearly 800. ⁽i)The coverage was extended to 507 municipalities in 1948, and as of 1956, stands at 901, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

[&]quot;Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and North West Territories for which only annual statistics are collected.

"Planks and boards, flooring and equare timber.

"Hollow blocks including fireproofing and load-bearing tile.

"For building insulation only.

"Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

"Includes concrete chimney blocks.

"Factory sales of firms which normally account for 96% of total Canadian production.

Note: Excluded from this tabulation are the charge accounts of certain categories of dealers whose credit is extended mainly to farmers or other businesses rather than

to consumers.

O'Consumers' charge accounts receivables outstanding on the books of retail dealers.

O'Consumers' instalment receivables outstanding on the books of retail dealers.

O'Instalment paper held by sales finance, acceptance, small loan companies and money lenders in connection with the financing of retail purchases of consumer goods largely new and used automobiles.

O'Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

O'The trade figures have been adjusted to conform to balance of payments definitions of the international exchange of commodities.

(D) Balance also reflects all other current transactions.

(D) Not sales (+) or purchases (-) by Canadians of Canadian and foreign securities (trading, new issues and retirements.)

Sources: Quarterly Estimates of the Canadian Balance of International Payments, D.B.S. and Statistical Summary of Bank of Canada.

CANADIAN NATIONAL DAILWAYS CANADIAN PACIFIC PAILWAY COMPANY

⁽i) In the upper section of this table, the annual statistics prior to 1955 embrace all steam railways, while monthly averages for 1955 and monthly data refer to railways with annual operating revenues of \$500,000 or over.

(i) Revised series. The Canadian Pacific, Canadian National, and Quebec North Shore and Labrador and Pacific Great Eastern railways now use the "Uniform Classification of Accounts for Common Carriers by Railway". The 17 remaining railways included in these statistics do not currently use the "Uniform Classification", but will be required to do so as from January 1, 1957.

(ii) The 1955 figures are not strictly comparable with previous years, due to the addition, in January, of 5 railways and the deletion of one. On a comparable basis, revenue tons carried in November 1955 would have been 17,100,000, revenue tage acried oas mile 5,025 million, revenue passengers carried till 2.1 million and revenue passengers carried to make the comparable with previous years, due to the addition, in January, 1956, previously included in "Other Railways".

Soarce: Railway Operating Statistics, D.B.S.

⁽a) Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages (a) the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.

(a) From July, 1954, the figures are not adjusted for items in transit.

(b) Prior to July 1st, 1954, the statutory minimum requirement was 5 per cent for each day; since that date it has been a monthly average of 8 per cent.

(b) Mainly deposits of foreign banks.

(c) Capital, rest fund and undivided profits as at the latest fiscal year-end.

(c) Including issues payable in foreign currency.

(d) Espaining January 31, 1957, month-end figures for chartered bank holdings of Government of Canada and provincial government securities are based on "amortised value" and an therefore not directly comparable with fingures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding month-ends, which are based on "not exceeding market value".

(d) Beginning January 31, 1957, month-end figures for preceding market value".

(d) Beginning January 31, 1957, month-end figures for preceding market value".

(e) Beginning January 31, 1957, month-end figures for preceding market value".

(e) Beginning January 31, 1957, month-end figures for preceding market value".

Note.—This series gives total naw settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and Penion bonds without insurance.

Totals are estimates projected from the sales reported by 31 companies operating in Canada representing 87 per cent of new ordinary insurance sales.

"The Canada totals by months for 1955 and 1956 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. The Canada totals are comparable for these two years. Provincial monthly totals for 1955, however, are not comparable with those for previous wars due to changes by several companies in the manner of reporting new business. For 1956, the provincial figures are comparable with each other, but are not strictly comparable, with previous years; the same applies to the 1957 data. The annual figures for Canada and the provinces are consistent, although the 1956 data are still preliminary. Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to set profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" is used here means the total profits of all companies carning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (tuckding government-owned companies and incorporated co-operatives).

O Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction.

Rubber, Leather, Non-Metallic minerals, Petroleum and Coal and Miscellaneous Manufacturing Industries.

*Assignments made under the Bankruptcy and Winding Up Acts.

Of 1949, provision is made for proposals from insolvent persons. Since July, 1950, agreements made under this method are not included with the statistics of bankruptcies.

Liabilities of insolvent persons making proposals are not available.
